AN ARTIFICIAL INTELIGENCE BASED AGRONOMIST

Supervisor: Dr. Gulsher Ali
Electrical Engineering Department, Sukkur IBA University, Pakistan

ABSTRACT

- Develop the android app to provide the required information about the plant.
- Help in Economy
- Help in Government million tree tsunami project
- Collaborate with the NGOs, government bodies and Agriculture departments.

OBJECTIVES

- Identification of plants using Machine Learning
- Access of Basic Information of plants. E.g., Identification of regional plants or categorize them with respect to their region.
- Knowledge about the methods to grow plants
- Android App Development
- Data set Collection
- We also aim to develop this application in both languages i.e. English and Urdu.

GHROUP MEMBERS

Ghulam Sarwar

Fatima Zehra Alvi

Saeed Akbar Khan

ACHIEVEMENTS

- **Won DICE AFS held at MNS University, Multan (PKR/-1,00,000)**
- **Won Incubator at NEP NICs Sukkur**
- **LAB2MARKET (Top 5 Teams)**
- **Idea Bank Pakistan 2021 City Round Qualifier**
- **Runner-up Hult-Prize at Sukkur IBAU**

Help In Economy:

- Provider of basic essential to life.
- Help the Government to solve the problem of climate changes and Tree Tsunami.
- Increase the plantation increase the tourism spots by using our Application

Creating awareness:

- it will help people to provide the required information about the plant.
- Safe trees plant trees
- do experimentation and learn about plantation

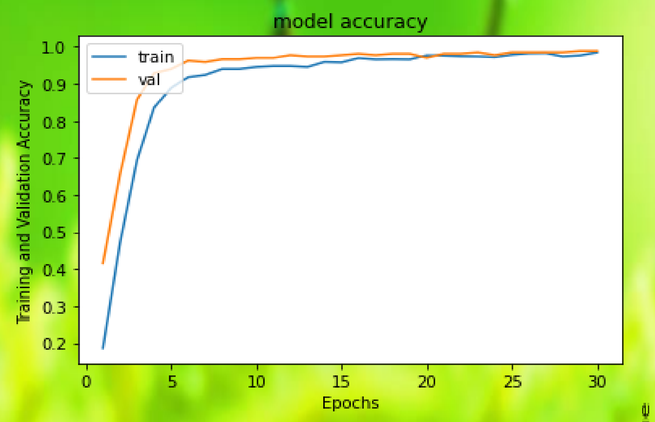
METHODOLOGY

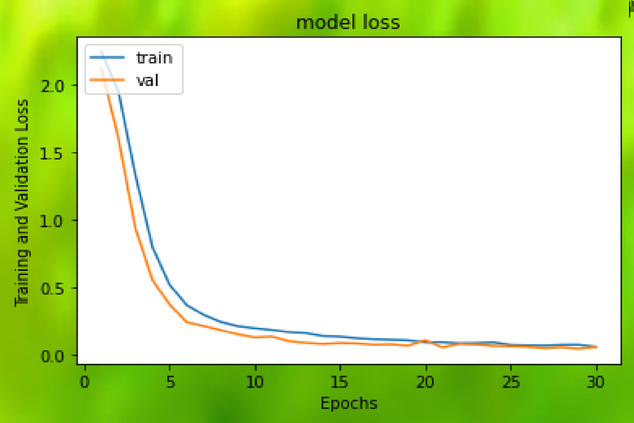
Data Collocation → Pre-processing → Model Training → App Development → Classification

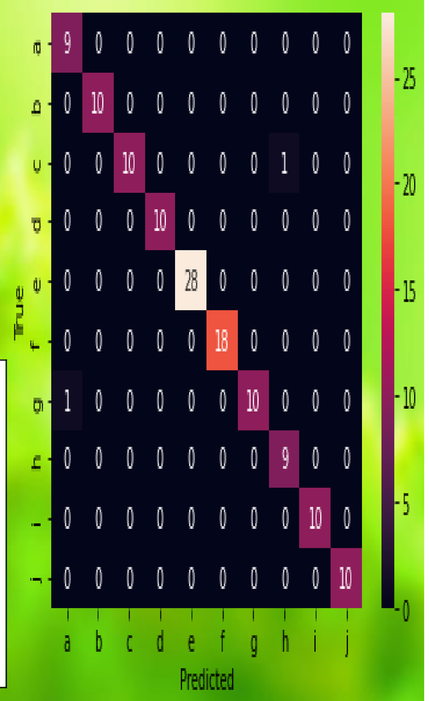
CONCLUSIONS

To sum up concisely, the lives in the era of pandemic are focused by remaining indoors. People prefer to have those solutions that they can now access by sitting at their homes. Our application "Agronomist" is developed by considering all these aspects of current situations faced by the locality and by the whole world i.e. the problem of growing plants. It will help almost all the people to at least grow plants at their homes.

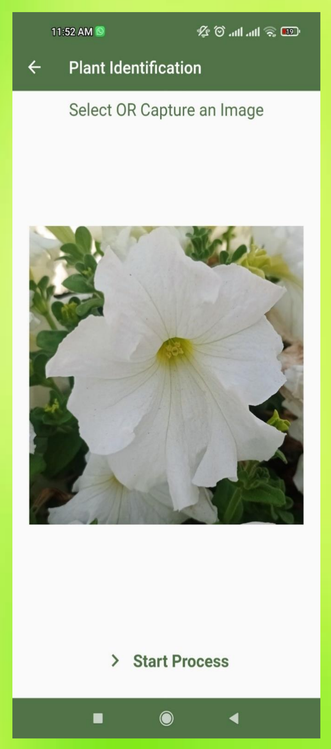
MODEL TRAINING







RESULTS



Name: Yellow Dahlia (Lemon Sherbet)
Season: Spring
Region: Pakistan
Description: Yellow Dahlias require a fertile, moist but well-drained soil, and a sunny, sheltered spot. The taller varieties need staking. In autumn, dig up the tubers and overwinter them in a frost-free place, such as a greenhouse or a shed. Bring them back into growth in early April, then plant out in the garden from May onwards.
